Financial and Non-Financial Highlights

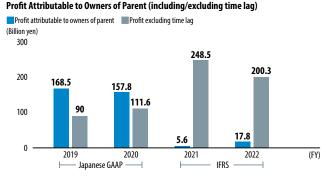

We are taking on a variety of initiatives to meet our management goals for profitability, capital efficiency, growth potential, and financial health, including a consolidated net profit of 200 billion yen in FY2025.

Additionally, with a fundamental emphasis on safety, we shall expedite our ESG and sustainability efforts, which include promoting the active participation of a diverse and inclusive workforce (D&I) and strengthening corporate governance, all while ensuring a stable electricity supply. We aim to realize medium- to long-term decarbonization, thereby pursuing disciplined growth and maximizing corporate value. We have voluntarily adopted the International Financial Reporting Standards (IFRS) from the consolidated financial statements for the annual reporting of FY2022, and the figures for FY2021 have also been modified in accordance with the IFRS.

Financial Information

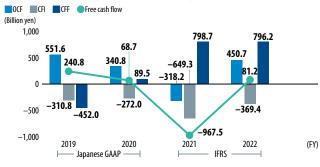

Revenue in FY2022 increased significantly compared to the previous year, mainly due to higher unit revenues in electricity sales.

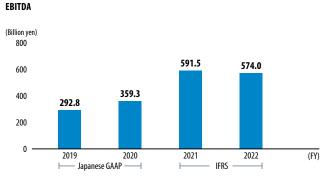

Net profit for FY2022, excluding time lag, decreased due to factors such as the impact of LNG spot procurement and the recording of estimated liabilities, despite increases due to higher earnings in our trading business and gains related to the sale of LNG.

*Profits or losses attributable to delays between fuel price fluctuations and when they are eventually reflected in sales prices

Cash Flows from Operating, Investing, and Financing Activities (CF)/Free Cash Flow

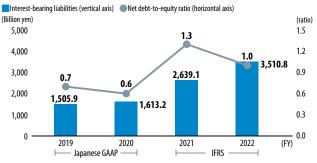

In FY2022, our free cash flow increased by approximately 1 trillion yen. This was due to factors such as an improvement in operating cash flows due to a decrease in margins at trading subsidiaries in addition to the reactionary effects of substantial overseas investment projects conducted in FY2021, which led to a reduction in capital expenditure in the investment cash flow.

In FY2022, EBITDA remained high, as in the previous year, mainly due to increased earnings in the trading business amidst the unstable fuel market conditions caused by the situation in Russia and Ukraine. EBITDA = Earnings before interest and taxes* + Depreciation and amortization + Interest expenses

*Excluding time lag

Interest-Bearing Liabilities / Net Debt-to-Equity Ratio

In FY2022, our interest-bearing liabilities increased significantly as a result of costs carried over and associated financing. However, our net debt-to-equity ratio improved from the previous year as a result of better market conditions in the second half of the year and capital-based financing to maintain financial health. Net debt-to-equity ratio = (Interest-bearing liabilities – Cash and deposits). + Net worth*

* Equity — Non-controlling interests

(%) 10.0 8.0 6.7 6.0 4.4 3.7 3.2 4.0 2.0 0.0 2020 2021 2022 (FY) 2019 Japanese GAAP —— IFRS

In FY2022, we secured net profit of 200.3 billion yen, excluding time lag, mainly due to increased profits from our trading business, but this was lower than in the previous year due to a significant increase in interest-bearing liabilities. ROIC = {Net income^{**} + Interest expense \times (1 – Effective tax rate^{*2})} \div (Interest-bearing liabilities + Net worth^{*3})^{*4}

Financial and Non-Financial Highlights

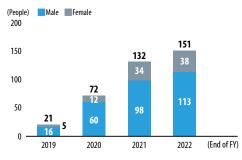

Non-Financial Information

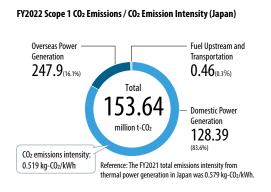

We are responsible for approximately 30% of the power generation output by domestic electric utilities. A large portion of this power generation comes from LNG, which has low CO₂ emissions.

*Source: Agency for Natural Resources and Energy website (https://www.enecho.meti.go.jp/statistics/ electric_power/ep002/) (Japanese)

Number of Mid-Career Hires (by gender)

We are actively hiring people with diverse backgrounds and advanced expertise not yet represented at JERA. With the demand for agile matching of talent to business strategy, the number of mid-career hires is showing an annual upward trend as each business evolves.

As part of JERA Environmental Target 2035, we aim to reduce domestic CO2 emissions relative to FY2013 by 60% by FY2035.

Number of Outside Directors

(As of July 1, 2023)

Outside Directors

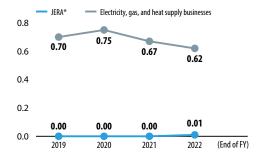

6

11

We will expand our wind and solar power generation business in Japan and overseas by promoting large-scale renewable energy development that leverages our strengths.

Employee Injury Frequency Rate

We are committed to company-wide efforts for safety, the bedrock of our business, with aims to eradicate occupational accidents. *JERA employees only

4 of these directors come from outside

of JERA and its shareholders companies

Diversity on the Board of Directors

(As of July 1, 2023)

We conduct employee satisfaction surveys to gain a quantitative understanding of employee opinions about their work and job fulfillment. We aim to raise employee satisfaction and work to foster an open and fair corporate culture and a work environment where everyone feels comfortable.

In addition to JERA-employed executive directors and directors who have come from our shareholder companies, we hire outside directors in order to ensure a diversity of knowledge, experience, and other qualities among the Board of Directors.

We believe that a diverse Board of Directors leads to better business decision-making and have made efforts to appoint female directors and foreign nationals to the board.

The Infrastructure Behind Our Strategies

*1 Calculation boundary: JERA in Japan, Hitachinaka Generation Co., JERA Power TAKETOYO LLC, JERA Power Yokosuka LLC, and JERA Power Anegasaki LLC (unless otherwise noted)

*2 Calculated based on our own facilities as of the end of the fiscal year (March 31) of the year in which the data was collected

*3 Figures for JERA operations in Japan
 *4 Totaled on a wet coal basis (ar; as received)

*5 Totaled on a dry basis (ad: air dried)

*6 Calculated based on the Act on Promotion of Global Warming Countermeasures

*7 Calendar year totals

*8 Calculated by using the adjusted emission factor for each electric utility published by the Ministry of the Environment and Ministry of Economy, Trade and Industry.

- From FY2021, part of purchased electricity is replaced by self-transmission, and the emissions associated with self-transmitted electricity are accounted for as Scope 1 emissions.
- *9 Galculated by the formula below in accordance with "Basic guidelines on accounting for greenhouse gas emissions throughout the supply chain (Ver.2.5)" on "Green Value Chain Platform (Ministry of the Environment website)" "Effectivity received from other companies">CENSION Company Company

"Emission factor 2": Cited from "IDEA Ver.2.3" *10 Figures based on net power generation

*11 Calculation boundary. The Calculation boundary of *1 plus domestic joint venture power companies. Figures of domestic joint venture power companies are calculated based on JERA's equity share in each company

*12 Calculation boundary: The Calculation boundary of *11 plus totals for overseas businesses. Totals for overseas businesses are generally aggregated based on local fiscal years and reporting standards and calculated based on JERA equity stake.

This data is also available on our corporate website, and starting with values reported for FY2021, we have received third-party assurance from KPMG AZSA Sustainability Co., Ltd. for certain environmental data, including GHG emissions that are disclosed on the website.
