

DPP Package Overview

✓ A data-driven O&M solution across the power plant lifecycle

A package of applications related to O&M tasks

A solution supporting all steps in the PDCA cycle

DPP Package

Operations

- Operation / Onsite Data
- Alarm management
- Abnormality management
- Outage Plan management

Advanced Operations

- Operating cost optimization
- Predictive Analysis
- Market linkage / optimization
- Efficiency management

Maintenance

- Workflow management
- Inspection data management
- Periodic inspection management
- Equipment information

Maintenance Enhancement

- Lifetime management
- Interval optimization
- Maintenance plan
- Lifecycle optimization

Performance Management
Task Management

Plan

Real-time management of people, equipment (things), and finances (money) across the life cycle.

Do

Centralized collection, analysis, and utilization of all operation- and maintenance-related data.

Adjust

Real-time optimization using AI and simulations linked to external data.

Check

Constant confirmation of performance through KPI and benchmark analysis tied to the value tree.

DPP Package Utilization

Predictive Analysis

Digitization of Information from the Field

Outage Planning

Performance Checks / Decision-making
